

Computer-Based Exams Index

Directions for Using the Computer-Based Exams Index

The Computer-Based Exams Index allows candidates to identify specific academic content in each of the three sample examinations. For example, consider the following entry: **Motor control 2: 17, 38; 3: 67, 88.** The bold numbers represent the exam number and the non-bold numbers that follow represent the question number within the respective exam. Therefore, questions pertaining to motor control are located in Exam Two: Question 17, 38 and in Exam Three: Question 67, 88. The index provides candidates with an efficient and effective method to review selected academic content after completing each of the sample examinations.
